- Light Up Your Fishes Life!

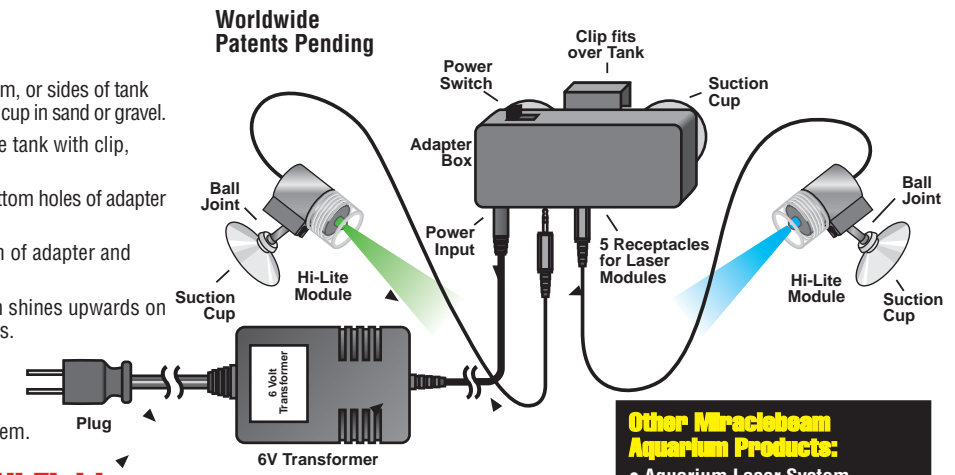

MiracleBeam™ Model No. 2043

# Hi-Lite UNDERWATER AQUARIUM LIGHTING SYSTEM

The MiracleBeam™ Hi-Lite Aquarium Lighting System is the newest and most exciting concept in aquarium lighting today. You can use these super bright LED lights to light bubbles or spotlight aquarium objects. The Hi-Lite System comes with green and blue modules and other colors can be purchased separately. They may be left on continuously and will shine brightly for over 25,000 hours. You may plug up to 5 Hi-Lite modules in the adapter box which clips or uses suction cups to adhere to the back of your tank. Extra long cords allow the modules to be placed in aquariums up to 500 gallons with the cords run inconspicuously under gravel or rocks and behind plants and decorations. We decorate our homes with lighting effects. Now you can decorate your aquarium!

**SIMPLE TO INSTALL IN MINUTES:**

1. Attach Hi-Lite modules to back, bottom, or sides of tank using suction cups or bury the suction cup in sand or gravel.
2. Place adapter box on the back of the tank with clip, suction cups, or both.
3. Insert plug of Hi-Lite modules into bottom holes of adapter (up to 5 modules may be added).
4. Plug power supply cord into bottom of adapter and plug in transformer.
5. Adjust Hi-Lite modules so that beam shines upwards on bubbles or towards tank decorations.
6. You may combine up to 5 Hi-Lite modules, MiracleBeam™ Laser modules, Treasure Chest modules, or Lighthouse modules on this system.

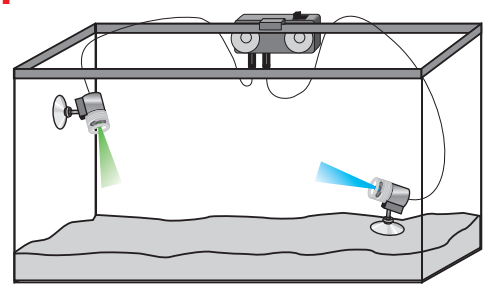

**Completely Safe for All Fish!**

**Perfect for Fresh and Salt Water Species!**
